POINTS

WORKSHOP | ADVANCED ANTICOAGULANT AND ANTIPLATELET MANAGEMENT IN THE ICU

OBJECTIVES:

- 1- To gain understanding on the latest research and advances in reversal strategies, including new reversal agents and emerging therapies.
- 2- To apply knowledge through interactive case discussions focusing on real-world clinical situations in the ICU involving anticoagulant and antiplatelet management and reversal.

INVOLVES:

- Management of patients with major bleeding and coagulopathy, balancing anticoagulation needs with hemorrhage control
- Case studies focused on emergency reversal of anticoagulants in trauma patients with active bleeding
- Scenarios involving cardiovascular patients, such as managing post-operative bleeding in patients on dual antiplatelet therapy
- Reversal protocols tailored for trauma situations, including coagulopathy management and blood product administration
- Key guidelines, algorithms, and resources for managing anticoagulant and antiplatelet therapy and specific reversal strategies in the ICU.
- The different anticoagulant agents used during ECMO support, considerations for use and monitoring strategies including patients with coagulopathies, and those with contraindications to certain anticoagulants.

PRE-REQUISITE:

- All healthcare providers in the ICU.

WORKSHOP

ADVANCED ANTICOAGULANT AND ANTIPLATELET MANAGEMENT IN THE ICU

WORKSHOP TIMETABLE

| | | |
|-------------|--|---|
| 09:00-09:45 | Complex Challenges in Coagulation Management Strategies: Managing critical patients with major bleeding and coagulopathy while balancing anticoagulation needs and hemorrhage control | Afrah Alkazmi Patrick Wieruszewski |
| 09:45-10:30 | Trauma and Emergency Care: Case studies on rapid anticoagulant reversal in trauma patients with active bleeding. Protocols for blood product administration and coagulopathy management in critical situations. | Afrah Alkazmi |
| 10:30-11:15 | Cardiovascular Patient Scenarios: Handling post-operative bleeding in patients on dual antiplatelet therapy. Strategies for high-risk cardiac patients requiring tailored anticoagulation management. | Patrick Wieruszewski |
| 11:15-11:30 | | |
| 11:30-12:15 | Specialized ICU Considerations: Use and monitoring of anticoagulant agents during ECMO support. Management of coagulopathies and contraindications in complex ICU cases. | Patrick Wieruszewski |
| 12:15-13:00 | Practical Tools and Resources: Review of key guidelines, algorithms, and decision-making tools for anticoagulant and antiplatelet therapy. Step-by-step protocols for effective anticoagulant reversal. | Afrah Alkazmi |
